

Task 6: Create a Strong Password and Evaluate Its Strength

Cyber Security Internship Report

Objective

Understand what makes a password strong and evaluate password strength using online password strength checker tools.

Password Strength Results

Password Example	Strength	Remarks
password123	Weak	Dictionary based
Welcome2026	Medium	Contains letters and numbers
Ganesh@2026	Strong	Uses symbols and numbers
G@n3sh#Cyber\$2026	Very Strong	High complexity and length

Common Password Attacks

1. Brute Force Attack
2. Dictionary Attack
3. Credential Stuffing
4. Phishing

Best Practices

- Use 12–16+ characters
- Include uppercase, lowercase, numbers and symbols
- Avoid personal information
- Use unique passwords
- Enable Multi-Factor Authentication

Findings and Conclusion

Longer and more complex passwords are significantly harder to crack. Strong passwords combined with Multi-Factor Authentication provide better protection against cyber attacks.
